Installation

1. Remove crankset from bottom bracket.
2. Remove chainrings you wish to replace.
3. Clean crankarm and chaining bolts thoroughly.
4. Grease chaining bolts and install All-City 612 chaining. The machined recess around the chaining bolt hole allows the chaining bolt to sit flush with the surface of the ring. Make sure the bolts fit down into these recesses.
5. Install the chaining nuts from the back of the crank spider.
6. Install the chaining bolts through the front of the All-City 612 chaining and alternately tighten them evenly to chaining bolt manufacturer's recommended torque specifications.

⚠ WARNING: Periodically check to make sure the chaining bolts are tightened to the proper torque specifications. Failure to do so and riding with a loose chaining could cause a crash resulting in serious injury or even death.

NOTE: Remember to keep your chain and chainrings well lubricated, and remember to inspect these and all other components for excessive wear, accidental damage, and premature failure before every ride.
