## Cog and Lockring Installation and Instructions

### COG INSTALLATION

1. Apply a liberal amount of grease to the cog's threads.
2. Thread the cog clockwise onto the larger set of hub threads. The cog should go on fairly smooth. Don't cross thread it. If in doubt, back it off and start again.
3. Once cog is snugly threaded onto the hub use a chain whip to tighten it completely.

### LOCKRING INSTALLATION

1. Our lockrings use English threads (1.29" X 24tpi LH). Be sure the lockring threads are compatible with your hub before installation.
2. Apply grease to the lockring threads.
3. Thread the lockring onto the hub counterclockwise. Use a lockring spanner to tighten the lockring firmly against the cog.

**NOTE:** Make sure the lockring and hub threads are completely engaged prior to use.

**NOTE:** After the first ride check the tightness of the lockring. By riding you will likely have tightened the cog further onto the hub, and the lockring will need to be retightened against it.

**NOTE:** Periodically check the tightness of the lockring and the cog.
